SUMMARY

Senior Full Stack Engineer with 4+ years of experience building and scaling enterprise-grade, high-performance web applications using React, Node.js, and Micro-Frontend architectures. Proven ownership in delivering greenfield products to production, including AI-powered platforms and data-driven admin systems. Strong expertise in Module Federation, performance optimization, and resolving high-severity production issues, with a consistent track record of reliable delivery and collaboration across global teams.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, JavaScript (ES6+), TypeScript, Redux, Ant Design, Material UI, HTML5, CSS3
 - **Architecture:** Micro-Frontend Architecture, Module Federation, Reusable Component Systems
 - **Backend & APIs:** Node.js, Express.js, Fastify, REST, GraphQL
 - **Databases:** MongoDB, MySQL, Redis
 - **Security & Auth:** Keycloak, FusionAuth, JWT, OAuth, Role-Based Access Control (RBAC)
 - **DevOps & Infra:** Git, GitHub, Jenkins, CI/CD, AWS (EC2, S3)
 - **Practices:** Agile/Scrum, Code Reviews, Performance Optimization
-

WORK EXPERIENCE

Senior Software Engineer , Photon Interactive Private Limited

Sep 2025- Present

- Led end-to-end development of Tenetic, a B2B AI-powered admin platform for consumer behavior tracking, owning both frontend and backend architecture.
- Designed and implemented a scalable 3-layer backend architecture, integrating:
- AWS S3 for AI-generated PPT storage
- FusionAuth for secure authentication and multi-tenant access
- Databricks for AI model execution and workflows
- Implemented a hybrid data strategy, using MongoDB for AI-generated and unstructured data and MySQL for structured, transactional modules.
- Resolved critical development and release-time issues across frontend and backend, coordinating with QA and DevOps teams to ensure stable deployments

Associate Software Engineer, Kaay labs Private Limited.

May 2022 - Aug2025

- Leading the development and enhancement of large-scale enterprise admin platforms across pricing, data processing, and workflow management domains.
- Architected and maintained Micro-Frontend systems using Module Federation, enabling independent deployment and seamless integration of multiple frontend applications.
- Owned critical UI modernization initiatives, migrating legacy UI frameworks (Ant Design v3 → v8), improving performance, UI consistency, and long-term maintainability.
- Acted as the primary escalation point for high-severity production issues, diagnosing complex frontend and integration failures to ensure system stability and minimal downtime.
- Collaborated with cross-functional teams across locations to ensure smooth data flow, consistent API contracts, and on-time delivery under tight deadlines.

PROJECT EXPERIENCE

Tenetic

- Built an AI-driven platform to generate, manage, and store PowerPoint presentations dynamically based on user prompts and templates.
- Designed the system with multi-tenant architecture, enabling secure client isolation and future enterprise scalability.
- Integrated AI workflows via Databricks, handling model execution and content generation pipelines.
- Implemented secure authentication and authorization using FusionAuth, supporting role-based access control.
- Managed large-scale structured and unstructured data using MongoDB and MySQL, ensuring performance and reliability.
- Integrated AWS S3 for secure storage and lifecycle management of AI-generated PPT files.

Pie Factory

- Developed environment-specific data pipelines to fetch, process, and transform client data from Western markets.
- Built real-time dashboards and advanced chart visualizations, enabling faster decision-making and actionable business insights.
- Took full ownership of the admin panel, managing client accounts, system configurations, and granular user access controls.
- Ensured high system reliability by designing efficient data workflows and implementing secure access mechanisms.

Mouser Electronics(Admin Portals & Pricing Tool)

- Designed and developed enterprise-grade admin portals to streamline client order processing, approval workflows, and pricing management.
- Implemented real-time market-based price comparison tools, enabling cost optimization and faster decision-making for internal users.
- Led frontend modernization by upgrading UI frameworks, resulting in improved performance, modern UI standards, and easier maintainability.
- Implemented a scalable Micro-Frontend architecture using Module Federation, enabling seamless integration of multiple independently deployed frontend applications.
- Resolved complex cross-application dependency and runtime issues, ensuring stability across federated modules in production.

DataBP(Multi-Tenant Admin Panel)

- Built and led the development of a scalable multi-tenant admin system to manage client orders, track progress, and control order lifecycles.
- Took ownership of architectural decisions, ensuring secure data isolation and role-based access control across multiple clients.
- Optimized application performance and scalability to support concurrent enterprise users and diverse client environments.

EDUCATION

Bachelor of Engineering(CSE)

Jun 2015 - April 2019

Anna University College of Engineering

CERTIFICATES

- Full Stack Developer INTERNSHIP Namaste JavaScript Certificate
- Namaste JavaScript Certificate
